357 Micro Disrupter (K7000)

- The .357 Magnum Micro Disrupter is a breech loaded .357 gauge system used principally for disruption purposes; other uses include cutting, penetration of, and the removal of I.E.D. fuzing system components. This is accomplished by projecting various solid projectiles, shot, or liquid material out of a .357 caliber barrel.
- The .357 Magnum Micro Disrupter is shock tube initiated and percussion actuated.
- It is constructed of high grade stainless steel.
- The .357 kit comes with one .357 smooth bore barrel for water shots, and one rifled bore for precision shots.
- The .357 barrels are 12" long.
- The .357 Magnum Micro Disrupters have interchangeable breech parts with the original 12 gauge PAN Disrupter™.
- The .357 Magnum Micro disrupter is capable of firing shots up to 2000 feet per second.
- Two or more targets inside the bomb can be impacted with an isochronicity of 500 microseconds of each other.
- The .357 Magnum Micro Disrupter is the only .357 disrupter currently on the market that can have two or more fired together within milliseconds of each other.

QTY	Kit Components
1	Case
1	Gun Bore Cleaner
1	Brush Container
3	Brush
