5740 Fork Delivery

This robot accessory is designed to be used in the robot gripper. We have different gripper blocks for different robots. The shaft is 2 inches in diameter and will fit into the standard gripper block made by Ideal Products Inc. The gripper block is purchased separately.

The mount is able to accept a set of flat forks or round forks depending what needs to be delivered. Being controlled and held by the gripper, means the operator can set this down and do other operations without returning to the base. The round forks work with Alford Technologies items. The round and flat forks are easily exchanged.
