## **K5600 VIP Gander Surveillance System**

Ideal Products, Inc. is the sole manufacturer and distributor for the VIP Gander Surveillance System. As far as we know, there is no other system on the market that has the capabilities of our Gander System.

The VIP Gander System was designed for large vehicle bombs such as in the Oklahoma bombing and is currently the only system that has been developed and characterized for the Andros Robot for this type of application. The capabilities of the VIP Gander System are the ability of looking into a box truck (or other such vehicle) with three (3) surveillance cameras for switchable viewing angles through the robot system. The VIP Gander System has also been used in hostage situations by breaking out a window of a house and being able to view inside the house without endangering any officers.

The VIP Gander System consists of:

4 - Cameras

1 - Directional Probe View

1 - End View

2 - Side Views

Control Box (with lighted display)

2 - 12 volt aux. Ports

Universal mounting to Remotec  
Robots

5' 6" Reach of Probe

Height Extensions of 3' and 5'

Quick install clips
