K200 MINI PAN UNIT

This disrupter is similar to the 12Ga PAN but uses a .410 round instead. Note that the smaller bore means a smaller OD along the barrel and will need mounts specific to the barrel (smaller than the PAN) to hold it to stands and robots. This will also have specific laser housings, plugs, seating tool, ammunition, and breech cap. The diameter of the clamping area is 1.25 inches and the muzzle is .875 inches.

L-Tech Enterprises makes ammo specific to this gauge. Contact them to get velocities and capabilities.

Please note that the breech plug, push lock parts, and spare parts are the same as the 12Ga PAN and can accommodate 1/8", 4mm, and Mini shock tube.
