T3 Disrupter

- 12 Gauge Disrupter System
- Shock Tube Initiated Push lock Breech Plug Assembly
- Standard PAN Ammunition and Specialized Sabo Rounds, Ammo *Not Supplied*
- Titanium
- ACME Threaded Breech and Barrel Tips
- Smooth Bore Barrel Tip – standard PAN rounds, Ammo *Not Supplied*
- Rifle Bore Barrel Tip – Specialized Sabo rounds, Ammo *Not Supplied*
- 18" or 24" Barrel Length

The light weight and versatile T3 has all the capabilities of the Original PAN™ and more.

Alone the T3 is an 18" barrel, making use in confined areas easy. However, the barrel can be extended to 24" with the addition of the supplied barrel tips. The barrel tips not only extend the disrupter length but determine shot type including: 140 ml of water, solid, disintegrating or specialized projectiles.

The T3 has user-friendly ACME threads on all adjoining components. These unique threads make assembly and disassembly easy and fast and will not let the breech lock on the barrel. Not only are the threads user-friendly, the innovative T3 breech is now a two-part assembly: breech plug and breech cap. Using multiple breech plugs, technicians are able to perform numerous shots without cleaning the breech. Although innovative, the breech plug is also economical with less expendable parts
